Physics Insights. By the end of this unit, students should be able to: describe Newton's law of motion as applied to the situations of one-, two- and three-body systems; describe the four forces that affect objects: gravitation and the three other conventional forces, including electromagnetism; predict the force that Earth's attraction exerts on a falling object of mass  $m$ , and on an object of mass  $m$  free-falling under gravity; explain the concept of friction, examine how friction applies to a system, and discuss the consequences of friction; identify and describe the concepts of kinetic energy, potential energy, and energy of motion. Suggested Reading 'O' Level Physical Science Questions, suggested readings in "Physics (Oxford)". These have been written by students at the University of Oxford, and are intended for, but not limited to, 'A' level physics. Each reading provides an introduction to the topic, with questions and suggested experiments. Loo, Wan Yong : Physics insights 4 editions published between 2000 ; Suggested readings in 'A' level physics Umphysics. Advice on physics for teachers and their students. A-level Physics and Chemistry. Each chapter contains an introduction, and a number of self-contained problems, the answers to which are verified and checked by the A-level exam board. Students will find these questions appropriately challenging for the course, and will be able to do a fair amount of conceptual thinking. Please look at the website and be assured that these problems are deliberately designed not to be too demanding for students who have already done an in-depth study of the physics of A-level. No more than three or four problems in any one chapter will require the most sophisticated of applications of force, whereas a large proportion will require no more than a quick check of the relevant equations.
