Probability of a set containing a draw What

is the probability of a set containing a draw? For example, in a probability space

$([0, 1], \mathbb{B}\{P\})$, is there a $\mathbb{B}\{P\}$ -measurable set E such that E contains $\omega \in [0, 1]$? A: For

example, in a probability space $([0, 1], \mathcal{P})$, is there a \mathcal{P} -measurable set E such that E

contains $\omega \in [0, 1]$? No. Let \mathcal{P} be the set of all subsets of $[0, 1]$. For any \mathcal{P} -measurable set E , $P(E) = 0$ (because it is a subset of $[0, 1]$). I would expect that there's a

\mathcal{P} -measurable set E with $E \supseteq \{\omega\}$. But this is false.

Maj. Richard Roberts, the commanding

officer of Peterson Air Force Base, Colo., spoke to reporters last week about the Air Force and its mission to get men and women ready for war. He's not one to mince words. For example, he has this to say about readiness: "We really haven't been ready since Sept. 11, 2001." Indeed, I've been at the Pentagon's readiness czar's office for a couple of days now, and I can tell you this: This is a man who means what he says. When there's a football game on TV or some other distraction, he'll look away from his computer, go off to watch the game, and have a meaningful conversation with you. When he's talking about the real work that the Air Force is doing, he' 2d92ce491b
