DNS Tools Crack [Mac/Win]

Cracked DNS Tools With Keygen is a very easy to use application developed to perform multiple lookups. Although there's no help section included in the app, DNS Tools shouldn't get you too much trouble if you're an experienced user, mostly because it all comes down to just a few clicks. DNS Tools is more

like a mix of simple, yet essential features and a plain and well-organized GUI, so the lookup process doesn't usually take more than just a few seconds. For example, the app can perform A, MX, PTR and country lookups, which means that it helps you retrieve information on an IP address of a domain, mail exchange servers for a domain or simply the country a specific domain

is based in. Additionally, the application displays abuse addresses for each checked domain, this time using a dedicated panel right in the main window. There are no other configuration options and this is clearly good news for those who don't want to spend too much time using the app. Of course, DNS Tools works smoothly on all Windows versions and doesn't ask for administrator

privileges when it comes to launching it on Windows 7 machines. To sum up, DNS Tools does its job and is aimed at more experienced users who don't need assistance when it comes to a simple A or MX record lookup. The app comes with the essential features and nothing more. Files & Filing Buy or Rent the software you need with your major credit card. Download and install it for free, then

activate it by simply downloading and installing the registration key. If you have a valid license key or purchase order number, you can continue using the software without buying.

What's New in the DNS Tools?

- DNS Tool Suite: an easy to use, powerful and most importantly useful set of tools designed to make your everyday life much easier and fun. • Support for Microsoft Internet Explorer, Mozilla Firefox, Opera, Safari and Google Chrome, and it is compatible with Windows 7, Vista, XP. • Enable you to make a detailed

comparison between the addresses belonging to the same domain. • Retrieve search domain info, domain registration info, domain status info, domain forwarding info and lots more. • New: Domain name “PTR” record and “Country” record added, which are very useful and essential. • New: The domain status report added, which could save you a lot of time when checking a domain’s

status. • New: All known domain/host names and IP addresses are included in a XML file for easy usage and can be updated manually at any time. • New: A new type of DNS lookup added, which can be really useful for many users, e.g. to check if your mail is still working, check whether a domain is located in a different country or to verify if an IP address still exists. • New: An ability to

record detailed info on received IP-based emails. • New: Advanced option added to a tooltip to make it easier for the user to select a checkbox, and an ability to set a new default search domain, and a new default report file name. • New: A New “Verify” button added to a domain status report to automatically compare the domain’s details with the ones recorded in the XML file. •

New: A bug fixed to make the process of creating a new XML file, which includes all known IP addresses in a directory, easier. •

New: A bug fixed to make the process of updating the XML file, which includes all known IP addresses in a directory, easier. •

Improved: The process of creating and updating a new XML file made a lot easier by using the

“Tools->Options” menu item. •
Improved: A checkbox added to enable/disable the view of the current abuse address for each checked domain name. • Improved: A bug fixed to make the domain status report save the name of the XML file, which includes all known IP addresses in a directory. • Improved: A new option added to select a domain name from the current

report. • Improved: A bug fixed to make the domain status report remember the chosen report name. • Improved: The keystroke used to save the XML

System Requirements:
