A Java interface for interacting with the Adobe Acrobat Reader. Most of the commands and attributes related to the PDF format are exposed as methods. New features are implemented through improvements in this interface. PDFMaker is a Java software that allows you to create, edit, and extract pdf files. It is able to create a PDF file from any application that can export in PDF format, and also allows you to edit and extract pdf files. It is possible to add text, images, links, tables, formulas, graphs, shapes, etc. Through this Java application you can merge and split pdf files, insert pages, change layout, create annotations, highlight text and tables, and other operations you need to organize your pdf files. PDFMaker can also create PDF files from Microsoft Word (.docx), Excel (.xlsx), OpenOffice.org (.odt), and many other programs that export files in the PDF format. Application Description: PDFMaker is a Java software that allows you to create, edit, and extract pdf files. It is able to create a PDF file from any application that can export in PDF format, and also allows you to edit and extract pdf files. It is possible to add text, images, links, tables, formulas, graphs, shapes, etc. Through this Java application you can merge and split pdf files, insert pages, change layout, create annotations, highlight text and tables, and other operations you need to organize your pdf files. PDFMaker can also create PDF files from Microsoft Word (.docx), Excel (.xlsx), OpenOffice.org (.odt), and many other programs that export files in the PDF format.
