# GILDAN RIGHT FOR ME

We're asked this question a lot--is an incredibly cheap tee like the G500 right for a screen printing job? What if I want to use sublimation? What about shrinkage?

Low-priced options like the G500 aren't side-seamed, meaning they may not give you a more retail or "tailored" fit. The G500 also isn't knit from, say, ringspun cotton, giving it a "firmer hand" and a thicker feel than other offerings.

# THREE LEVELS OF SOFTNESS

If you're looking at Gildan apparel for all your printing needs, you need to know that Gildan offers three main levels of fabric softness. The three examples above represent Gildan's three levels

- Ultra Cotton
- Heavy Cotton
- Softstyle

# WHAT ABOUT GILDAN HOODIES?

Offerings like the G125 are different in that Gildan uses a Dryblend technology that combines 50% cotton and 50% polyester.

# THANK YOU
